

CEN-PE-CO ATOMIC POWERED DIESEL FUEL CATALYST

Cen-Pe-Co Atomic Powered is a unique fuel additive that reduces and uniformes the droplet size of diesel fuel when injected. It is different than other additives because it changes the properties of the fuel and is not dependent on injector cleanup to produce performance benefits. Atomic Powered boosts power, saves fuel, reduces engine vibration, and reduces smoke and emissions. This year-round additive also keeps fuel flowing through the coldest weather. The superior benefits provided by our patented chemistry have been proven in over 100 dynamometer tests by an engine manufacturer's engine test laboratory and over 4 million miles of closely monitored field performance.

THE CATALYTIC EFFECT:

- Typical horsepower increase of 7.8%
- Typically reduces fuel consumption 5.6 to 8.9%
- Noticeably reduces engine vibration and smoke

OTHER BENEFITS:

- Exceeds Cummins L-10 injector cleanliness requirements
- Exceeds Cummins N-14 injector wear requirements
- Restores lost lubrication
- Inhibits discoloration, degradation, and resulting filter plugging deposits arising from storage or the heat of electronic injection systems.

WINTER BENEFITS:

- Approximates a 40% kerosene blend
- Rated #1 at lowering Cold Filter Plugging Point
- Fights icing

BLENDING:

Cen-Pe-Co Atomic Powered is recommended at 1 gallon per 1000 gallons of diesel fuel for all the benefits of the catalyst. For winter, this treat rate approximates a 40% kerosene blend. For severe cold, double this treatment rate.
